

Micron Testing Directions

Directions:

1. Find the last rib as shown by the white square in the above photo.
2. Cut a 2” square using scissors, blade shears, or electric clippers. Clip as close to the skin as possible. A minimum of 2” growth is needed as well. Do not disturb the locks.
3. Place fleece sample in a plastic Ziploc bag with the sheep’s name, date of birth, and date sample taken on a card in the bag or written on the bag.
4. Send sample to one of the wool testing facilities with the appropriate funds and your information.
